PROJECT PLAN – Marking criteria

Student(s) name(s) and numbers: Jordan Haigh, Evan Gresham, Mathew Rixon

Assessment criteria	Comments/Mark
Title Title is less than 20 words long. It reflects the topic and the goals of the project.	(_3_ / 3) Title is adequate.
Background Describe the background of the project, giving information of the industry or research group where the project will be undertaken.	(_8_ / 10) Excellent background describing the current state of robotics regarding self-driving cars. There could have been a few additional references here (AI, Q-learning, DNNs and EAs). The rule of thumb is that when you throw a technical term or make a definite statement, you need a reference.
Aims Describe the objectives of the project.	(_20_ / 20) The aims are clearly defined and are closely aligned with the overall topic of the project. This seems to be a very challenging project. I think the simulated part will be OK, but transferring that to the real vehicle will be a complex task, especially because the Raspberry Pi has very limited processing power. It will be interesting to see the results.
Activity plan Describe in details the activities to be undertaken, the possible outcomes and possible challenges. Add a timetable with the activities.	(_30_ / 30) Excellent!
Ethics considerations Discuss any ethics considerations that might emerge from the project	(_6_ / 6) The ethics considerations are relevant to the project.
References (if applicable)	(_4_ / 6) This work could have used more references, given the technical level of the activities.
Presentation of the document Clarity of written English and flow of ideas. Correct use of visual aids.	(_13_ / 15) Document is well-organized. However, it has many English style and grammar mistakes. For instance, the first sentence “Self driving cars are no longer a thing of the future, we have them here and now, however the Artificial intelligence in these vehicles requires thousands of hours of training data and millions of lines of code, where the developers directly teach the the AI how to act.” is way too long, with commas between what should be sentences, and a double “the” at the end. The same happens in other parts of the document. The plan should have been proof-read before submission.

Statement of individual contribution State which student(s) contributed to each part of the project plan and to what extent	(_10_ / 10) Very good.
---	------------------------

Total: _94_ / 100

Obs: Since this project is very technical (and it is in my area of research expertise), I would like to meet the team on week 8 to discuss some aspects of the project plan.
